Congenital Chagas Disease Survey

1. How would you describe your level of knowledge about congenital Chagas disease?
   - Excellent
   - Good
   - Limited
   - Very limited
   - I didn’t know that congenital infection could occur

2. Chagas disease is caused by a:
   - Bacteria
   - Virus
   - Parasite
   - Fungus
   - I don’t know

3. How often should you consider a diagnosis of congenital Chagas disease in a newborn infant who is born of immigrants from Mexico or Central or South America?
   - Never
   - Rarely
   - Sometimes
   - Frequently
   - Always

4. The Centers for Disease Control and Prevention estimates that the number of newborn infants with congenital Trypanosoma cruzi infection per year in the United States is in the range of:
   - <50
   - 50-500
   - 501-5,000
   - >5,000
   - I don’t know

5. Chagas disease can be transmitted congenitally if the mother became infected:
   - During the pregnancy
   - Within 1-3 months before becoming pregnant
   - >5 years before becoming pregnant
   - During the pregnancy or within 1-3 months before becoming pregnant
   - Any of the above
   - None of the above
   - I don’t know

6. The risk of congenital transmission from a mother with chronic Chagas disease to her infant is:
   - <1%
   - 1-10%
   - 11-25%
   - 26-50%
   - >50%
   - I don’t know

7. What percent of infants with congenital Chagas disease are symptomatic at birth?
   - <10%
   - 10-40%
   - 41-75%
   - >76%
   - I don’t know

8. Cure rates for congenital Chagas disease exceed 90% when instituted in the first few weeks of life.
   - True
   - False
